

Quiz Questions

Module 5 | Persist Login Sessions with Cookies

1. Data stored in `localStorage` and `sessionStorage` can be sent to the server with every HTTP request.

A: True

B: False

2. Cookies with the `HttpOnly` flag are not accessible through client-side JavaScript.

A: True

B: False

3. Cookies with the `Secure` flag are immune to CSRF attacks for all web browsers (old and new).

A: True

B: False

4. Which of the following best describes what `sessionStorage` is in context of web browsers.

A: Data that is persistent in browser memory, only accessible through client-side JavaScript, and is not automatically sent to the server during an HTTP request.

B: Data that is only accessible through client-side JavaScript, is not automatically sent to the server during an HTTP request, and is deleted/removed when a browser tab or window is closed.

C: Data that is persistent in browser memory, inaccessible with client-side JavaScript under certain conditions, and is automatically sent to the server during an HTTP request.

D: None of the above.

5. We've enabled persistent log-in sessions in our app with the help of cookies and by firing a `logIn` request from the client to the server whenever our app first renders.

A: True

B: False
